CROWN

We use the Boing aluminum reinforced reflective corners strips to help guide employees to exit and protect them from the overhead conveyor uprights

The original need for the corners was to cover a building X-brace employees must walk under. The corner strips provide protection from overhead injuries for employees working the pick module and conveyor area.

The corner strips are also used in heavy traffic areas around more overhead conveyor uprights. The strips provide not only walkway marking but also protects the employees from the upright bolts and other protruding metal.
