

Rubber Safety Flooring

FAQ's

Why use Softile?

Softile rubber safety flooring makes the most sense:

- Can be used indoors or outdoors
- Easiest material to install (can be DIY)
- Most cost effective material per square foot.
- Easiest product to move with you to another location
- Many colors to choose from
- Many fall heights to choose from

What is Softile made from?

It is made from recycled rubber with the top layer impregnated with a color blend

Where can you use Softile?

Indoors or outdoors, virtually on any solid., level surface.

Is it safe?

Exceeds ASTM 1292 safety standards for safety surfacing by 25%. This ensures the product will comply to the standard throughout the 10 year warranty period.

Fall heights?

The thickness of the tile will depend on the Fall Height. Ranges from 3 to 10 foot fall heights.

Is it long lasting?

10 year warranty - but only 5 year warranty if used in/around a swimming pool environment.

How do you attach?

For indoor applications, it can be “loose” lay, but we recommend tile-to-tile adhesive.

For outdoor applications, there is a requirement to use adhesive to glue tile-to-tile to stay in warranty.

In what colors is it available?

There are 3 color groupings:

Basic - Black - the least expensive

Plus - Forest Green, Terra Cotta, Blue

Premium - customized colors to meet your specific needs

Minimum Orders?

1. Basic & Plus - Minimum \$500 + shipping

2. Premium
 - Minimum 250 pieces (tiles and/or ramps)
 - if less than 250 pieces, there is a \$250 “set-up”fee.
 - if less than 250, pieces, minimum dollar value of \$500 (not including set-up fee or shipping)

Can you paint it?

Yes - you need a special rubber paint.

UV Treated

Yes for long lasting outdoor use, however , color stability/longevity is not covered under the warranty. This limitation is the general rule for any/all rubber unitary surfacing manufacture.

There is generally no discoloration or fading indoors unless there is exposure to UV rays from outdoors.

Can you use Soffile around swimming pools ?

Yes - but only the “Premium” grade because factory can make a little denser in the production process. Same rules for “minimums” apply. Customer must indicate “pool use” in advance. In addition, pool use version only has a 5 year warranty - not the standard 10.
