

## RUBBER SAFETY TILES

Create your own unique designs

Each Tile  
2' x 2'

Interlocking rubber tiles allow for all the benefits of a poured-in-place safety surface,

Our rubber tiles have been developed, engineered and thoroughly tested, to offer superior impact resistance for any play environment, outdoors and indoors.

This major advantage gives our customers a virtually monolithic safety surface that installs simply, precisely, and securely with a minimum of labor and adhesive. This eliminates potential problems due to expansion and contraction of individual tiles.

Stanchions on the bottom allow for a lighter, more affordable tile, that not only ensures, but increases the impact attenuation of the entire tile surface.

### "PREMIUM" COLOR SATURATION

25% color

50% color

75% color

90% color

For any of the 11 "premium" colors, you can order according to the actual percentage of a "color" mixed in with the basic black

25% = 25% color + 75% black

50% = 50% color + 50% black

75% = 75% color + 25% black

90% = 90% color + 10% black

You can also order custom colors
